

# Ruby on Rails for DB2 developers

|                       |                        |
|-----------------------|------------------------|
| <b>Address</b>        | {value_address}        |
| <b>Contact Person</b> | {value_contact_person} |
| <b>Mobile Number</b>  | {value_mobile_number}  |
| <b>Email</b>          | {value_email}          |

IBM DeveloperWorks has a helpful howto on how to bring the worlds of Ruby on Rails and your DB2 framework together. From the article: 'Because Rails emerged from the open source world, until recently you had to use MySQL or PostgreSQL to work with it. Now that IBM has released a DB2 adapter for Rails, it's possible to write efficient Web applications on top of your existing DB2 database investment.'
