SA-FileUp allows users with a web browser to transmit files from their local hard disk to a Microsoft IIS web server. Files can be of any format, such as Word documents, images or plain text. Developers can use SA-FileUp to receive and process user input, while staying within the context of their Active Server application. SA-FileUp also includes file download and file management components, which allow you to simply and easily download files from the web server to the user's browser, manipulate files, change ACLs and permissions, and register DLLs, all in a single, easy-to-use package.
