

## Safe Ajax contact form

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Providing a simple contact form could be a big security issue if the form script doesn't have any validation or security features. In the past it was very common to use simple mail scripts to post a web form to some e-mail address. A lot of the spam getting people in their mail box is send with vulnerable form mail scripts. These tutorial will show you how to create a simple mail form using Ajax and PHPMailer.
