Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Uses the DOM to generate RSS behind an interface of nested objects. So to set the channel's title, you say `RSS.Channel.Title = "My Weblog"`. Supports Dublin Core, Creative Commons, and Syndication modules. Can be used to generate RSS on-the-fly (with Conditional GET support) or write it to a file.
