

Script Scrambler

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Script Scrambler reads in your Perl source code and renames all variables and subroutines found to random characters, as well as adding random comments throughout and removing blank lines, making it extremely difficult, if not impossible, for anyone to read your source code. Script Scrambler can also make your scripts run faster because it can condense the scrambled script to a smaller size than the original. It's ideal if you want to sell your scripts but don't want to give out the original source code. The scrambled script is still a standard script, so any machine with Perl on it can still run it.
