

## searchTHIS (Applet)

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Using db.js and db.txt created by <a href=<http://www.hotscripts.com/Detailed/3692.html> target="\_3692">indexTHIS</a>, searchTHIS Applet conduct searches for words or phrases entered by your web site visitor. When the user types in a phrase and clicks the search button, the applet will search the db.txt file for the words. It will then associate the words with the appropriate link. During this association, it also saves a score of that link based on the number of times the words appear in the html file. Results that are returned are printed out in descending order, the first having the highest score and the last having the lowest score.
