

# Sending File from Client's Computer as Attachment

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

It is a program for emailing a file from the client's computer by email using CDONTS feature of ASP. No third party utility for uploading the file to the server is needed. Simple codes that need to be included for the execution of the program are also included. Of course, you require VB runtime library 5.0 to execute the program successfully. The script is flexible enough for attaching more than one file (though one file attachment is demonstrated). The email addresses etc are hardcoded here. So, you need to change these as per your requirements.
