

# Seraph Redirector

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Seraph Redirector will Load a page without Frames or Fowarding from another site. Now supports Post Vars, Cookie Vars and File uploading. For example You have a form that goes to [www.something.net/form.php](http://www.something.net/form.php) The script will then load the page other page [www.someotherthing.net/form.php](http://www.someotherthing.net/form.php) through the server and print it out what it returns. I call this Site Relaying. [www.something.net/dir/index.htm](http://www.something.net/dir/index.htm) Will Load [www.someotherthing.net/dir/index.htm](http://www.someotherthing.net/dir/index.htm)
