

serverStats 3.0.2

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Ever wanted to see who enters your site and how? With this program you can do just that. ServerStats is a RealTime PHP (Apache) Log Analyzer that parses your servers log file to list variable components. It lists IPs, Domains, Referrer's, OSs, Browsers, Pages visited, HTTP Errors, and Unique and Total hits in a nice easy to view page. Install script included for easy install. Read the Readme.txt to find out more. php 7.x+ mysql 5.x+ // fixes lots of bug fixes, new robot additions and easier to read layout. Now with graphs!!
