Sferyx JSyndrome HTML Editor is a Java component suitable for use in any Java application which needs HTML document authoring. It allows the creation of complex HTML documents visually, such as designing tables, inserting images, page backgrounds, editing text and paragraphs, and also has Spellchecker, Search/Replace, Source Editor and Preview functionality. It can be used as a stand-alone application, as part of a stand-alone application or as an applet. New features: full support for CSS, XHTML, international encodings, copy & paste, drag & drop from external applications such as MS Office etc.
