

## Short URL 1.3 - Tiny URL like Script

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Short URL 1.3 is a URL shortening script written purely in PHP. It makes short version of supplied URL. Actually most important is your domain name, the more short it is the more short URL's are created. Script does not allow same entries be posted again, so that database is kept unique and clean. Easy and compact Administration Panel is also available with script. Fully Search Engine Optimized URL's can be created for even more shorter versions. Easily place Ads that are shown before user can reach the actual url. Administrator can set certain amount of time (in seconds). Ad page redirects after the said (set) time period has passed.
