Simple ASP Chat

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This tutorial explains how to create a simple chat system using ASP. To start with create a simple form where the user can type some text. Whatever the client types in this form has to be appended to a text file, this text file will then be displayed to the client. The actual writing to the text file is done with an Active Server Script.
