This script is useful especialy when you have a lenghty tape and you only need to log few shots, use your vhs with burned in time code and enter the 'in' and 'out' points and script will generate the proper pal25/cmx3600 edl. Curently there is no support for 30fps timecode, but you are free to make a 'ntsc' version from this script. Version with some sounds added - for offline use is also available for download.
