

Simple Localization with PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

On PHP DevCenter, Adam Trachtenberg and Joao Prado Maia have described interesting ways to localize web sites with PHP. In this article I've offered another alternative, which should be easy for non-programmers to use. We will take advantage of the user function setstring function.
