

Simple PHP Page Template System

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

A common use for PHP is managing page templates. This makes it much easier to make changes to the layout on several pages by just editing one file. In this tutorial, I will explain some simple methods for managing templates in PHP. One involves using simple includes, and the others are slightly more advanced and flexible.
