Simple Table Display With Where Clause (Hard Coded)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Displaying specific subsets of data from a database is easy to accomplish in .asp. The following example utilizes an Access database of Mark "The Bird" Fidrych and displays all of his season statistics for 1976 contained in the database rather than displaying the entire db.
