Simple Text Counter

Address   {value_address}
Contact Person   {value_contact_person}
Mobile Number   {value_mobile_number}
Email   {value_email}

This example is a simple text based counter that will only show page views, not actual visitors. It uses the File Scripting Object to interact with a text file. It first reads the current number in the file and adds one to it, then displays it as text on the page.
