Slide Anagram

Address   {value_address}

Contact Person   {value_contact_person}

Mobile Number   {value_mobile_number}

Email   {value_email}

This applet takes 3 strings as arguments and will slide the letters around from one string to the next. It assumes the strings are of equal length and that they are anagrams (i.e. they all contain the same letters). The speed of the sliding is a bit unpredictable depending on the client's browser type and operating system.
