Smart Frame will allow you to load links to other sites in a frame. In another frame you can put a link back to your site or a banner (or just about any html code you want). A great way to keep visitors at your site... even when they leave your site. Smart Frame Pro also counts every click so you know which links are most popular. This CGI can also be used for linking to FILES on your site (like music, graphics etc.), and you can display the top 10 files to your visitors. Also allows your visitors to signup for their own frame style redirection which they can then use on their sites.
