

# Smart FTP

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Unlike many FTP CGIs who only imitate an FTP server, SmartFTP really connects to any FTP in the world! It does not only display files on the same server the CGI is installed on, but opens a real FTP connection. It lets you view files and browse an FTP, all on your web site with your design (colors, links, ad banners, etc...). It even has the basic features of an FTP program, such as deleting, renaming, making new directories, and more. Plus, some extra features most FTP programs don't even offer: Creating and editing any file (such as HTML or Text), which makes things faster and easier than using a separate editing program for files.
