

SmartWattermark – watermark all your images only with htaccses and php!

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The best way to protect your images is to watermark them. But that can be a real problem. This script will automaticly add a custom watermark on your pictures without modifying the original image. Isn't that cool? Features: all extensions avaliable ('valid_image_extension' => array('jpeg', 'jpg', 'png', 'gif') opacity ('opacity' => 0,) watermark logo path ('watermark_logo_path' => 'watermark.logo.png',) watermark custom logo position ('position' => 'left_top',) select the minimum size of the image to add watermark on -> 'min_size_for_wattermark' => 300, // if image is smaller than this value watermark will not appear (if you don't want to add watermark on your thumbnails & stuff) repeat xxxyyy watermark extra option!
