smc SiteSearch is a fast, efficient and flexible search engine, easy to configure for web sites or databases alike. smc SiteSearch works with multiple search criteria and nearly unlimited database capacities using simple delimited ASCII data files. It is also completely modular in design, allowing search scenarios as basic as a one line form to advanced, multiple search pages spanning your site. Fast and accurate searches are run from a small, but powerful 'smart' algorithm that has proven efficient on 10 items or 6000 items.
