

Snippet: Converting Seconds to Readable Time (PHP & JS)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Sometimes, you might need to convert an integer representing seconds into a format that is easier to read. These functions can be used to turn a number of seconds into a simple format of HH:MM:SS, with leading zeros (ex. 15272 = 04:14:32). This can be used for countdown scripts, which is why I also include both a PHP and a JavaScript version.
