

SocialEngine PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

SocialEngine PHP is a social network script that lets you create a social network or online community on your website. Right out of the box, your social network will offer nearly all of the features found on today's popular social networks. You are given absolute control over the appearance and structure of your social network. Add-on features as you see fit, including blogs, groups, photo and video albums, messaging, search, browse, subnetworks, spam protection, invite-only features, comments, news feeds, custom privacy settings, advertising banner management, who's online, custom profile fields, and more. SocialEngine is also the only 100% customizable PHP social network script available, with a template file for every single page on your network and 100% unencrypted PHP source code. Don't go with the cookie-cutter design of other products. Be unique!
