<b>Email</b>	{value_email}

PHP developers have always been reluctant in distributing their developments. SourceCop for PHP is a Windows based application, developed to encrypt your PHP code so that you can distribute it, without any fear. SourceCop for PHP encrypts a major portion of your PHP code using a special encryption method. This encryption makes it almost impossible for a human to understand. In addition, SourceCop can also encrypt file names, making it even more difficult to understand and change the PHP coding. Encrypt, Obfuscate, Encode.
