SourceX Source Exchange is an easy to use tool that allows online collaboration between developers, allowing users to upload text documents (HTML, CFML, et al) for online viewing, complete with line numbering and color coding. Features line numbering and built in color coding; Customizable color scheme; Customizable "accept" list of text based file extensions; Very portable, does not rely on custom tags; Uploaded documents are NOT stored in their native format, making executing them impossible; Users can optionally allow files to be downloaded (again, the ability to execute these documents is remote to nil since downloadable versions are saved with a .dl extension); Easy to implement: it's a single page.
