This tool improves the accessibility and usability of your web sites by adding audio content. You can link MP3 files to small images on your web pages to be played when the mouse roll over the images. The player is an invisible Flash movie controlled with JavaScript making the requirements minimum and compatible with most browsers, both Windows and Mac. You can insert and configure these audio players visually from the Dreamweaver menu. Accepts large files; download and plays the audio file at the same time, so you don't need to wait until the file downloads completely to start listening the audio content.
