<b>Email</b>	{value_email}

SpiderCache uses patent-pending dynamic caching algorithms to store dynamically created pages. SpiderCache reduces the processing requirements on active servers by caching dynamic web content, improving web page performance and reducing server loads. SpiderCache accelerates the delivery of dynamic content and extends web server scalability to save money and increase the bottom line. SpiderCache delivers up to 30 times performance gains while serving 4 to 6 times the number of concurrent users. SpiderCache does not require any modifications to the source code and requires no additional hardware.
