

Spinning your XML for screens of all sizes

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This article shows how to use HTML as an intermediate language so that you can write a single stylesheet to translate from XML to one or more versions of HTML and use the features of the WebSphere Transcoding Publisher server to translate the resulting HTML to the target markup language the requesting device requires.
