

Stivasoft Store Locator Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

An easy PHP Store Locator script with Google Maps API, Geo Coding, Google Map Directions, Store Filter, Translation Module. Unencrypted PHP Source Code and files to modify the PHP Store Locator. Use Categories to categorize business locations. Filter stores by category and distance. Add custom images to your zip map locator - map pins and category images. Through the PHP Store Locator admin select the default address, manage timezone, unit of distance, zoom, user access. Geo coding: find associated geographic coordinates (latitude/longitude) by entering the zip code or street address; or drag/drop the pin on the map to automatically input coordinates :) Google Map Direction: using the PHP Store Locator script users can get direction from their current location. Translation Module: translate the PHP Store Locator Script. Setup is really easy and quick and free installation support is provided by Stivasoft.
