It is a builder of vertical navigation menus. Use VMenu when you want to add a vertical navigation menu to your site. Due to the possibility to add captions/subcaptions to the menu, you can group items and create large navigation menus with really usable interfaces. Menus created with it are completely based on CSS and do not use scripts that is why they are most attractive for search engines. These menus perfectly work in all modern browsers. We have successfully tested them in Internet Explorer 6, FireFox 1.0, Opera 9, Konqueror 3.5.2, Netscape 7. Vertical Menu Builder consists of four sections: Items, Menu Style, Item Style and Output. Use the Items section to add/remove menu items, the Menu Style section to edit the general appearance of the menu, the Item Style section to edit the appearance of menu items and the Output section to get the final HTML/CSS code of the menu.
