SurgeMenu is a flexible, easily and highly customizable dynamic menu system that allows for very deeply nested, cascading, multi-tiered menus. It requires minimal PHP configuration time and uses standard CSS style definitions. SurgeMenu maintains its speed even with complex menus containing hundreds of items; run-time Javascript weighs in at under 6K, and heavily annotated source code comes in at 21K. SurgeMenu is compatible with Internet Explorer, Firefox, Opera, Safari, Netscape Navigator and others, and works with numerous complex web page layouts. SurgeMenu allows for as many Javascripted menu actions as there are menu selections - from simple page navigation to anything else Javascript allows. With detailed examples. Released under the terms of the GNU General Public License
