System Tracker is a small yet powerful utility that gives complete control over all active processes on your computer. Detailed information about processes you may find is available from our online database and is conveniently accessed with a right click on any process. Basically it describes the files you may have found and explains what they do, therefore enabling the user to make an informed decision when determining if the process is desirable. Not only does it audit your machine and present all active processes, System Tracker shows all registry activity in real-time, shows what programs are set to automatically start by location, and also enables users to set programs to not start. You will find the tabs resourceful and intuitively simple to use. Whether using it to track down system resource traps that create performance anomalies, or just to learn more about what is happening behind the scenes on your computer, we think you will enjoy System Tracker. All free.
