

TableToHash

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This small script allows you to turn a MySQL database table into a hash, and optionally a state-maintaining popup menu. There are two complementary functions: `tableToHash` which returns a hash, and `tableToPopup` which prints out a popup menu based on the hash. Note that you must have already opened a connection to a MySQL database before using this, otherwise `mysql` query will fail. Note: this site requires registration to access the file.
