

tableVarDump()

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Replacement for PHP's built-in `var_dump()` function for complex arrays. `tableVarDump()` outputs any variable to an HTML table format, specifically designed to display complex multi-dimensional arrays in a more easy to read format than `var_dump()` or `print_r()`.
