The E-Mail Protector Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This script protects your e-mail addresses from being grabbed by the most widely used e-mail collecting robots. The emp.cgi script works by checking whether an e-mail collecting robot accesses your web site. If this is the case the script hides your e-mail address. If the script is configured to run in bellingerent mode it also prints out a list of 10,000 invalid e-mail addresses, thereby rendering the database pretty much useless.
