

# TopSecret

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

TopSecret is a PHP script to protect your pages from the unauthorized users. TopSecret uses a MySQL database to store the user/password data. It works entirely based on the HTTP authentication provided by PHP 3 and 4. So, TopSecret is basically a security program. Don't use it to protect sensitive data, like financial data. It runs on Linux and Windows where PHP is installed as a service.
