This script is designed to cope with pincode billing systems. It adds a new dimension to your current pin systems. Currently an ibill module is available, however others could be coded per request. The user can create an account free for X days (definable) which then goes on to be billed onto an ibill pin account. The user never sees pins, nor do you. The script runs every so many minutes to call the ibill page to rebill any accounts that are due. They are removed (and email sent to them and you [optionally]) or left on the system and await another rebill period. You can have as many accounts as you wish each with time frames as long as you wish (definable in seconds). Prices are setup in your pin account. Full administration site available which allows addition of new pins to the system. All you need to do, once initially installed, is setup your pin accounts and edit your webgood page.
