If you are thinking of becoming a Kelkoo Affiliate, then you will need to transform a live XML feed directly from Kelkoo in order to be able to provide your customers with the ability to search and browse through your feed. Whilst there are several ways of doing this, getting it intergrated into your Web site and making every aspect (pagination, category searching category browsing etc) work together can be rather difficult. There are no scripts on the Internet at present that can achieve this for you, and unless you are prepared to learn ASP.NET, you're pretty much on your own when it comes to setting up the integration. This script is coded in classic ASP and uses XSLT to transform a live Kelkoo affiliate XML feed into user-friendly HTML. It is very easy to integrate into your site and customize it's look and feel to match your site. Version 2 has a number of aesthetic and user enhancements, including the ability to browse popular categories. Now in use by over 200 websites!
