Tutorial: Create a zip file from folders on the fly

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Creating zip files on a web server is a feature which could be very useful for backups or just for offering an unknown number of dynamic files or folder inside of a directory. This tutorial shows us how handle that with only a few rows of PHP code!
