TVEz is a browser-based system to manage movies, shows, and clips stored on local or remote file systems. It's a front end to XINE and lets you control your player from a Web browser. The playlist is fully managable. It retrieves movie info and cover images from IMDB and stores the info in a MySQL database. The database entries are fully searchable. TVEz has a rating system, themes, multi-language support, statistics, new additions, and user login to control access levels.
