A current trend in enterprise level document creation and publishing is to migrate processes to centralized server-based applications. TX Text Control .NET Server, the fully programmable word processing engine for deployment in an ASP.NET server environment, assists enterprises to realize this challenge. TX Text Control .NET Server 12.0 is a server component that can be deployed on Microsoft Internet Information Server. It is a fully programmable ASP.NET word processor engine that offers an extensive palette of word processing features. Using TX Text Control .NET Server 12.0, you can create documents on-the-fly from databases, binary files (Microsoft Word), ASCII files (XML, RTF, HTML) and image data (JPG, PNG, BMP, TIF, GIF, WMF). Output is sent to an HTTP stream or to a file, without displaying anything on the server monitor. TX Text Control .NET Server 12.0's rich set of word processing features can be accessed programmatically from server side.
