Mobile Number	{value_mobile_number}
Email	{value_email}

txt.page is a quick and secure way of serving up template-based documents -- especially manuals and other documentation -- in as small a format as possible. txt.page takes your content, which is in simple .txt files, and sandwiches it between your header and footer templates. As a result, changing your templates will change the look of every page at once, and the need to wade through full HTML pages to edit content is eliminated.
