

UberEats Clone PHP Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Waiting to start something like the app-based food ordering and delivery startup? Still, confused on whether to develop the app from scratch or purchase a ready-made script? If you want to focus more on the business side and spend less time on app development, then I strongly recommend you to use readymade app scripts. Readymade food app scripts are developed in reference to food ordering giants like UberEats. So you need not worry about its reliability and scalability.
