Ultimate PHP Site Backup v2.0

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The software itself is written in PHP , and runs on your web server. Simply upload it to your server, configure a number of files or (remote or local) MySQL databases which you need backed up, and set a button. UPSB will take care of the rest, saving those files to a zip, classifiying it by date, all in the background without intervention, according to a custom schedule. You can specify different schedules for different sets of files/dbs. Backups can now be stored on remote FTP servers, or sent as email attachments. Features:
