Un-CGI

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is uncgi, a frontend for processing queries and forms from the Web on UNIX systems. It decodes all the form fields and sticks them into environment variables for easy perusal by a shell script, a C program, a Perl script, or whatever you like, then executes whatever other program you specify.
