Thank you for making our ASP based UPS script a huge success! Now for the many who have been requesting that we provide this solution on platforms other than ASP, here it is finally. We are proud to launch the Active-X Control version of our UPS component. This DLL component can be integrated with any Windows Programming platform that uses Active-X. It is a true OOP (Object Oriented) class that comes with object properties and methods for ease of use. Now, the convenience of using realtime UPS shipping rates calculation is available not only to web developers but also to Client-server programmers of Visual Basic, C language, C++, Delphi, Java, etc. By the way, this DLL component can also be used by Windows-based web developers as a server object.
