

URL Redirect

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

A extremely handy script that allows you to have multiple domain names registered to one (1) IP address and have them all redirected to a sub site of another. For example, you register search.yourdomain.com, chat.yourdomain.com and scripts.yourdomain.com. Instead of having to use 3 extra IP's, you can redirect to yourdomain.com/search, yourdomain.com/chat and yourdomain.com/scripts.
