

# URL Search Engine

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

It searches a Text database file for one or more keywords input by the user and displays all the URLs that match the Search Query. This script can be modified for custom applications, and it doesn't just have to be URL search engine. It can also be used for searching virtually any type of text database... recipes, phone numbers, car dealers etc.
