Do you want to make some extra cash and get more visitors to your site? With URLforwarding you can provide other web sites with YourDomain.com/Username and Username.YourDomain.com type URLs that will redirect to their web site. Members can easily create and edit accounts. You make money from ads shown in the frame (top or bottom of page), pop-up window or delay page that appears on each member's site, you can also increase your site's popularity because people will see your domain name all over the Internet! URLforwarding supports unlimited domain names, just like the big sites! Version 3 supports subdomain URLs! Features: - Very easy to install. - Once setup you barely have to do anything. - Users pick if they want a header or footer frame on their page, a pop-up window, a delay page, or nothing. - You customize the contents of the frame, pop-up and delay page. (you can put banner ads in to make money and/or links to your web site.) - Users log in with their username and password to edit their account (where their new URL forwards to) and it is updated right away. - The Admin cgi let's you view how many accounts have been created, get the e-mail of any of the users, and other features. - A list of e-mails is made for you, so you can e-mail all users at once if you need to. - When a visitor of one of your user's sites bookmarks the page they will be bookmarking www.yourdomain.com/username. This is good for you and your users. - Unlike free web space giveaway, free forwarding does not use up much space on your server. Approx 1 kb of space per account and barely any bandwidth is used either!
